N SCALE vs. HO SCALE

When you start on the path to model railroading, the most important question you'll have to answer is which scale is right for you. Some of the terms tossed around in the hobby may seem intimidating, and words like "scale" and "gauge" are no exception, so let's define them and help you get on your way.

Scale simply refers to the proportion of the model to the prototype. **Gauge** is the width of the track, measured between the railheads.

Atlas produces trains in the three most popular scales. Their main determining factors deal with the amount of space and the amount of money that you wish to spend in the pursuit of your hobby. Generally speaking, the smaller the scale, the less costly the supplies and less expansive the amount of space needed to run your layout. Conversely, larger scales require more room and an investment of more money. The amount of detail and modeling work needed for each scale differs as well. Take a quick look at the following major scales:

HO SCALE:

This is the most popular scale and is 1:87 proportion to the prototype. It requires usually a small area for a layout, using a sheet of plywood or even a bookshelf for some of the smaller layouts, and there are many products available for HO scale modelers. The gauge of the track is 16.5mm.

N SCALE:

N scale is the second most popular scale and is quite small, being 1:160 proportioned to the prototype. Smaller trains will mean less detail, but you can build a relatively large layout in a smaller area than HO. The gauge of the track is 9 mm.

For information about our O product line, please visit <http://www.atlaso.com>

Of course you can't be expected to make a decision from that basic information. For additional specific scale questions and answers, try these time-tested, Atlas layout books:

- Atlas Item #9, *Beginner's Guide to HO Model Railroading*
- Atlas Item #6, *Introduction to N Scale Model Railroading*

You can also visit our website at www.atlasrr.com or take our quiz to see what scale best suits your specific model railroad needs.

PLEASE NOTE: For the purpose of this catalog, photos and/or illustrations on other pages may be shown larger or smaller than actual models.

ATLAS TRACK CATALOG-AVAILABLE NOW!

Atlas has three different high quality HO track lines (Code 100, Code 83 & True-Track®) and two different high quality N scale track lines (Code 80 & Code 55) to choose from, plus prototypical track accessories.

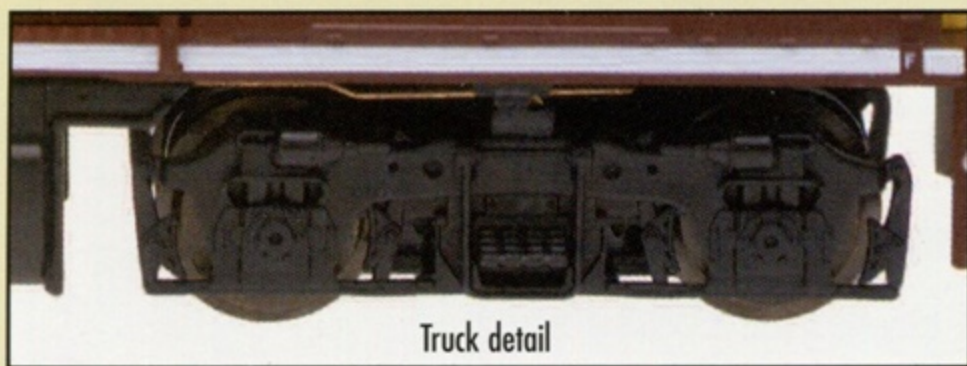

For your copy that includes HO, N & O scale layout ideas and benchwork construction tips, please send \$5 to 378 Florence Avenue, Hillside, NJ 07205.

ABOUT ATLAS MODEL RAILROAD COMPANY

Founded in 1949 from the original Atlas Tool Co., Atlas Model Railroad Company, Inc. has its roots in model railroad track and accessory making through invention, innovation and ingenuity. Today, after more than 50 years, Atlas is a leading manufacturer of HO and N scale track, locomotives, rolling stock and accessories for the model railroad industry.

Located in Hillside, N.J., Atlas has maintained a proud tradition as a family-owned business with a reputation for quality and excellence. That's why you usually hear the words "realistic", "accurate" and "absolutely amazing" to describe our model railroad products.

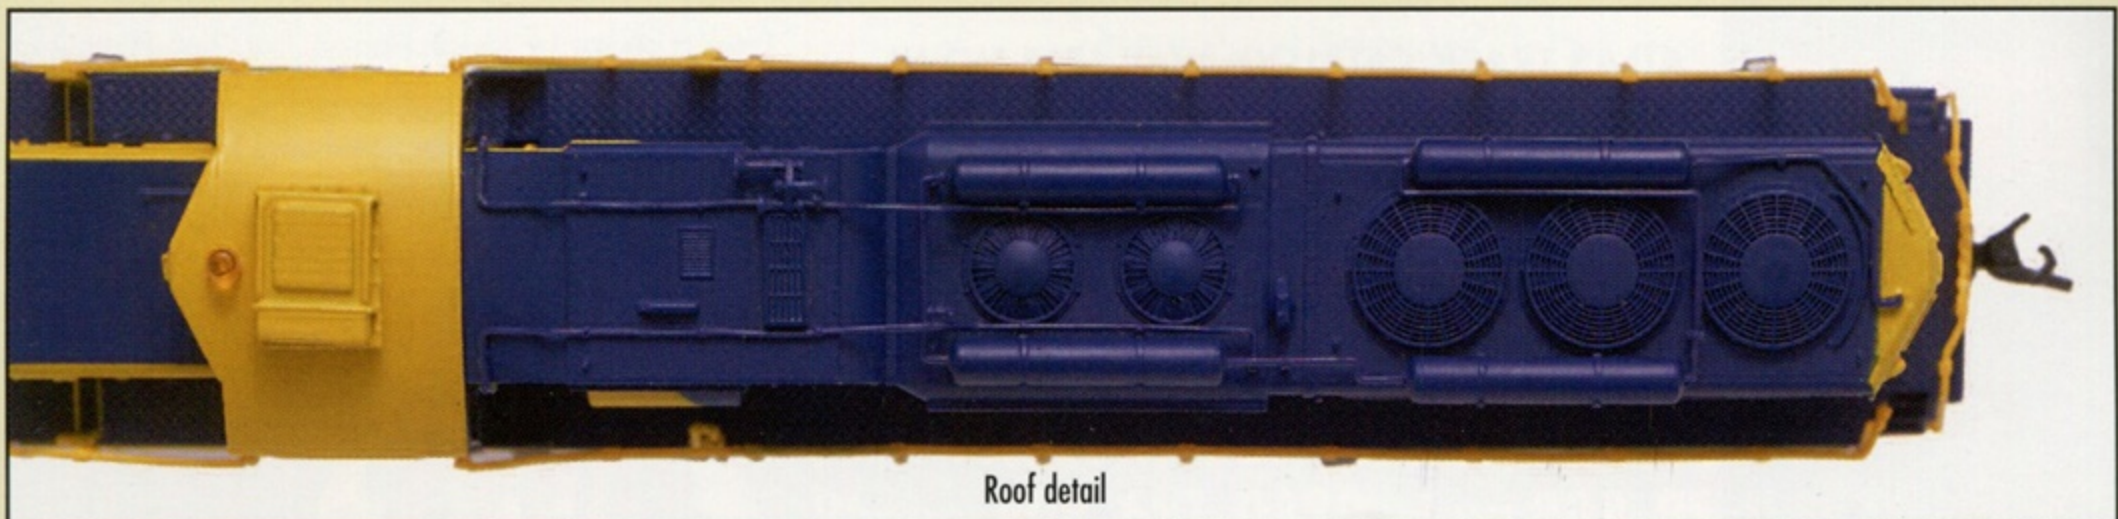

It's the details that make the difference in our HO & N Scale models. You'll notice that an Atlas model is a true representation of the real thing. The details are in the exact same position as the prototype, from the ladders and roof walks, to the brake gear and hoses. Even the painting and printing is done correctly, right down to the warning labels! We work hard to produce equipment with delicate detailing, outstanding printing quality and "real-life" appeal.

Truck detail

But not only does Atlas offer an incredible model, we also offer variety:

- **Over 45 Different N Scale Rolling Stock Body Styles with more than 500 Different Paint Schemes**
- **Over 25 Different HO Rolling Stock Body Styles with more than 265 Different Paint Schemes**

Roof detail

In addition, our popular line of HO & N scale locomotives feature smooth performance, state-of-the-art workmanship, quality construction, high quality electronics, and reliable engineering to satisfy your need for a great scale model.

And whatever time period you choose to model, Atlas makes a product that will suit your railroading needs. See your dealer to get your favorite!

Please take a look at what other industry experts have to say:

"Atlas' model of the [N scale] Coalveyor continues their excellent attention to detail." *Model Railroader, November 2003*

"As always with N-scalers, the decision boils down whether you will collect or

run your cars...These cars [N 40' Wood Reefers] are so well executed that they would make good items in a collection, but they also run so well that they belong in a train rolling around your layout." *Model Railroad News- February 2003*

"With its Classic [HO] GP-7 Atlas has done an excellent job of taking an already good model and making it even better." *Model Railroader, October 2001*

For a complete look at all of the wonderful products Atlas Model Railroad Company has to offer, please visit your local hobby store or www.atlasrr.com

You're On the Right Track®...With Atlas!

NEW ROAD NAMES! The earliest versions of the 2-6-0 Mogul Steam Locomotives were built in 1863 by the Rogers Locomotive Works in Paterson, NJ. It is estimated that well over 11,000 Mogul-type locos were built for the next 50-plus years. Similar to the 4-4-0 American-type locomotive that it was designed to replace, the 2-6-0 was a general-purpose steam locomotive that was found in both freight and passenger service.

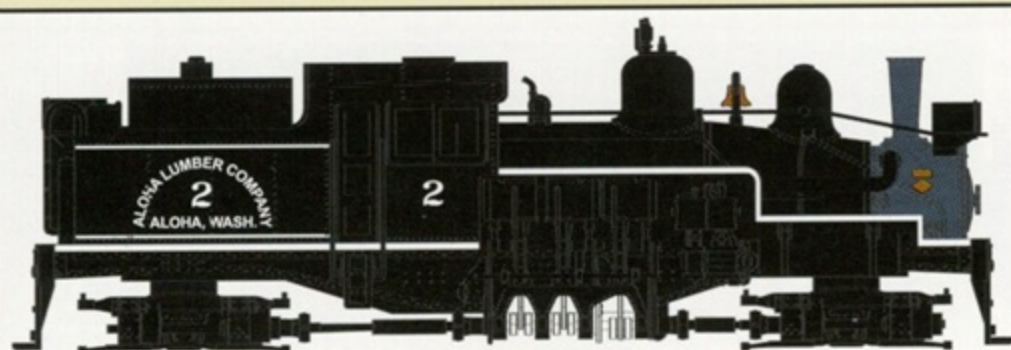

FEATURES:

- Colorful 1880s era paint schemes
- Smooth-running motor
- Operating headlight
- Separately-applied bell and handrails
- Factory-equipped with Rapido couplers (only)

NEW! Modeled after the Two-Truck Shay Locomotive that was built in the 1920s, this type of engine was used by many lumber, mining, quarry company railroads, other industrial railroads, a few common carrier short lines and major railroad systems for service in the logging and milling industries. Atlas' NEW N Scale version opens up a whole new world of N scale detail and realism. With a die-cast frame and boiler,

drive shaft detail, operating drive-shaft, directional lighting, all wheel drive and all wheel pick-up, separately-applied grab railings, AccuMate® couplers, and more, this new steam locomotive will be a sensational addition to your locomotive fleet.

Other Features: • Prototypical painting and lettering • DCC capable-motor isolated from frame • Minimum radius: 9-3/4"

NEW PAINT SCHEMES!

Built by Fairbanks Morse in the late 1940s through the 1950s, the H15-44 and H16-44 Locomotives were used for commuter service and road freight service throughout the country. Atlas' version is back in service with extraordinary new paint schemes for modelers' delight.

FEATURES: • Bi-directional red and green LED classification lights that work in DCC and analog mode • Scale Speed™ motor • Painted safety rails
• Factory-equipped with AccuMate® knuckle couplers • Golden-white LED headlights
• Blackened metal wheels • Two versions: Decoder-equipped (Lenz) or non-decoder equipped with PC board designed for easy conversion to DCC in the future if desired

NEW! During 1965 Alco started producing the 3,000 hp. Century 630 Locomotive. It was produced concurrently with the 2,800 hp. C-628, but it incorporated an advanced GE a.c. traction alternator which provided the extra 200 hp. The most distinctive spotting feature of the C-630 is the large aftercooler radiator housing which extends above the roofline (the aftercool-

er radiators enhanced the performance of the locomotive while operating under a heavy load). The C-630 also featured a modified cab which offered more interior space for the crew. Through the end of production in the late 1960s, a total of 133 units were produced for railroads in the US and Canada.

NEW MODEL! N SD-26 Locomotives NEW PAINT SCHEMES! N SD-24 Locomotives

In the early 1970s, Santa Fe started a rebuilding program for their large fleet of SD-24s, the result of which was the SD-26. Extensive modifications were made to the locomotives, making them visually distinct from stock SD-24s.

Most SD-26s were retired by Santa Fe in 1985 and 35 of these units were sold to Guilford Transportation Industries in 1986. Of this group, at least 3 were still in service for Guilford as of January 2004, over 44 years after they were built.

The Atlas SD-24 & SD-26 Locomotives are realistically detailed with prototypical features and paint schemes.

NEW PAINT SCHEMES!

Introduced by the Electro Motive Division in the late 1960s and early 1970s, the GP-40 was a 3000 horsepower locomotive, best characterized by the three full size radiator fans on the rear of the roof. The GP40-2 had mostly internal changes but several outside details such as bolted down battery box

covers and a roof that extended slightly beyond the rear of the cab were different from the GP-40.

Atlas' N scale model is loaded with fabulous details and features that make this model a "must have" for your model railroad set between the mid-1960s and the present.

NEW ROAD NAMES AND ROAD NUMBERS!

EMD introduced the SD-50 in the early 1980s with a 16 cylinder, 3500 hp engine to attain the earlier power from a 20 cylinder locomotive. The new, longer frame allowed the dynamic brake resistors to be relocated to a cooler area found between the central air intake and the cab.

The SD-60 varied little from its predecessor, the main changes taking place internally with the aging 645F engine being replaced by the 710G. The two locomotives can be distinguished by the door panels; the SD-50 features four latched doors in six door panels whereas the SD-60 has six latched doors in eight door panels.

PHONE: 908-687-0880 FAX: 908-851-2550

The SD-60M featured an odd windshield shape and a compound sloping of the nose top and side panels that offered the engineer greater visibility.

FEATURES:

- Directional lighting
- Blackened metal wheels
- Separate plow and winterization hatch that can be installed by the modeler
- Slower speed motor for closer to scale speeds
- Golden-White LEDs
- Full pilots with body mounted AccuMate® magnetic knuckle couplers

NEW ROAD NAMES! This highly detailed model is based on the 40' wood refrigerator cars built by Pullman for the Northern Refrigerator Car Co. in 1930. With its rooftop ice hatches, USRA-style fish belly underframe and vertical brake shaft, it is representative of the thousands of similar cars that were built during the "Billboard" era of American railroads.

FEATURES:

- Accurate painting and printing
- Door hinges, ladders, grab irons and end straps
- Opening roof hatches
- Realistic handle and latch detail
- Wood grain finish detail on carbody
- Ready-to-run
- 40-ton friction bearing trucks with AccuMate® couplers

NEW MODEL! This new N scale model is based upon a 1940s standard caboose design of the International Car Company of Kenton, Ohio. Typically associated with the New Haven Railroad, these cars were extremely long-lived and lasted well into the diesel era. Offered for the first time by Atlas in N scale, these cabooses offer a wide-variety of outstanding features that are sure to earn acclaim.

- FEATURES:**
- Ready-to-run
 - Friction-bearing caboose trucks
 - Finely detailed end rails, smokestack and ladders
 - Brake line detail
 - Weighted chassis
 - Accurate painting and printing
 - Factory-equipped with AccuMate® couplers

NEW ROAD NAMES & NUMBERS! These 53' double-door RBL insulated box cars were built by Evans between 1969 and 1977. Over 4,000 cars were built during this period and many can still be seen in regular service today. Atlas' realistic N model is based on the prototype with impressive detail combined with the high-quality you've come to expect from Atlas.

FEATURES:

- 70-ton roller-bearing trucks
- Prototypical painting and printing
- Ready-to-run
- AccuMate® couplers

NEW MODEL! The 17,600 Gallon Corn Syrup Tank Car was built in large numbers by Trinity Industries between 1984 and 1998. Of the over 7,000 cars that were built, most are still in active service today.

The cars utilize a common design that features variations in the manway/top platform arrangement as specified by large shippers such as ADM, Cargill and

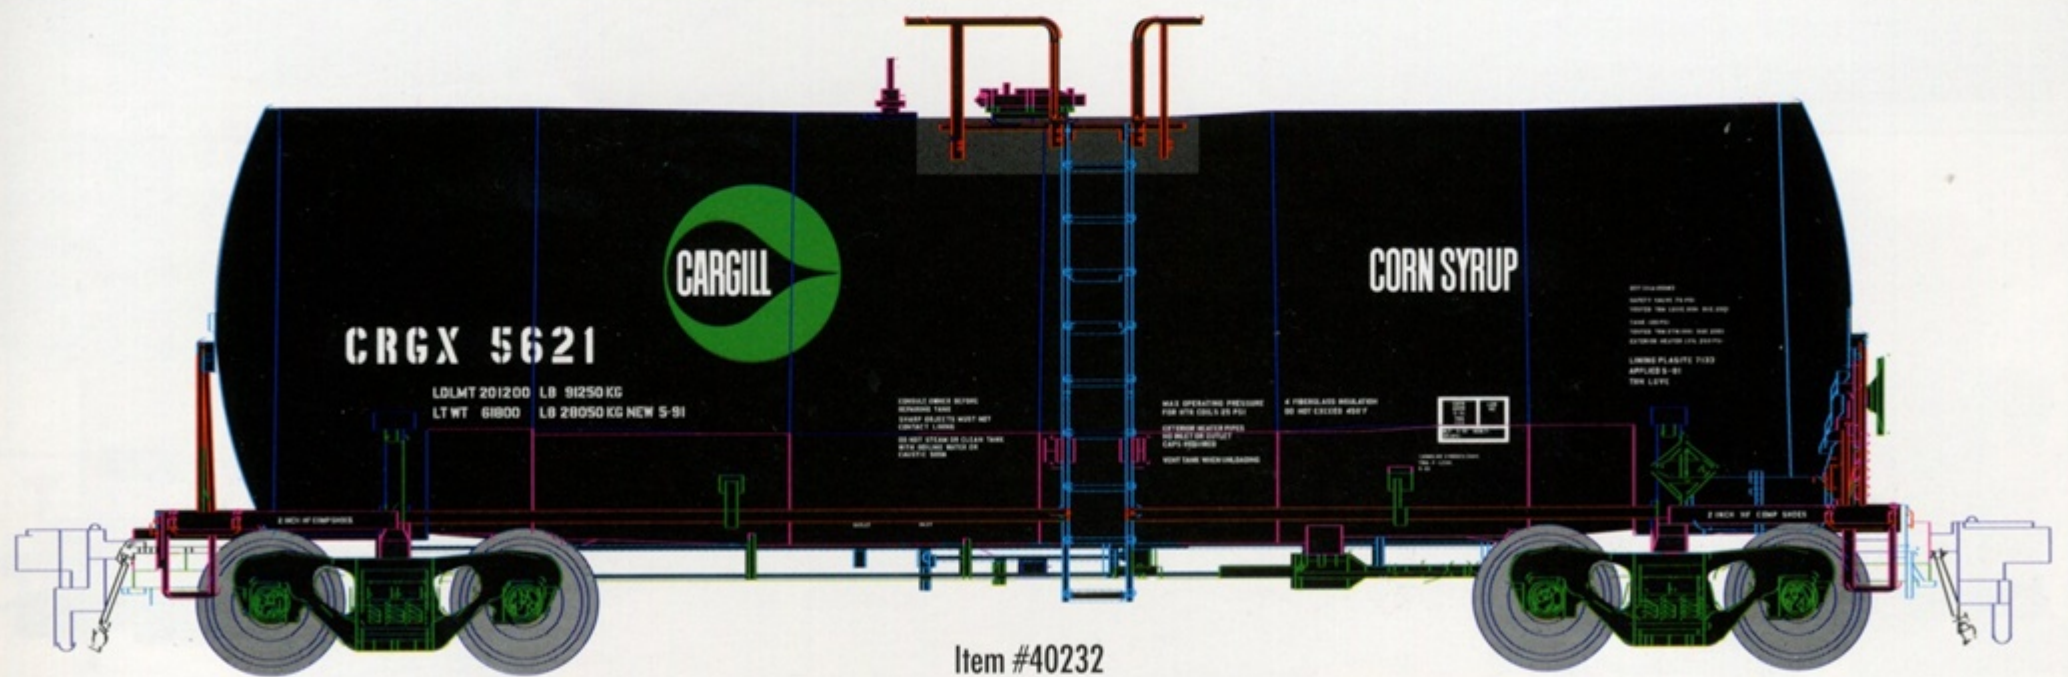

Corn Products. The new Atlas release features three of the most common arrangements.

The 17,600 Gallon Corn Syrup Tank Cars are commonly used to transport varying grades of corn syrup, liquid sugar, and molasses from processing facilities to bulk distribution centers and other end-users throughout the US and Canada.
