THE NON-DERAIL CIRCUIT BOARD - WORKS FOR ALL SCALES!

The Atlas Non-Derail Circuit Board adds enhanced operating features to Atlas and most other brands of switches. You no longer have to worry whether your switches (turnouts) are thrown correctly for safe passage of your train or rolling stock. The Atlas Non-Derail Circuit Board will give your layout automatic directional control without worry of your train and rolling stock derailing or causing a short.

#6924- Non-Derail
Circuit Board

The board will also help eliminate problematic switches (turnouts) on your pike where lighted rolling stock or locomotives cause power loss because of insufficient roller spacing.

Features:

- Electronic non-derailing works for ALL scales, be it 3-Rail or 2-Rail
- Power routing of closure rails
- Fully compatible with TMCC/Legacy, DCS, DCC and standard AC/DC control systems
- Interfaces with the Atlas O 21st Century Signal® System
- Will control two switches or turnouts
- Automatic polarity reversing on 2-rail systems

ALL SCALE ELECTRICAL COMPONENTS

Pricing on page(s) 97, 167, 254

We've spent years designing and perfecting what we believe is the easiest and most reliable electrical wiring system in model railroading today. Practical for all scales, the system consists of multiple sets of the most often needed switch types, internally pre-wired by printed circuitry. With Atlas' electrical components, the magic of train operation comes to life!

#215 - Selector

SELECTOR #215

This device enables the operation and control of two trains at the same time. It has four single-pole, double-throw switches to provide two-cab operation for four blocks and may be ganged together in any number to control additional blocks without inter-switch wiring. The Selector can be used as area selectors for four-cab operation, and couples with the #220 Controller.

#210 - Twin

TWIN #210

The Twin is a component consisting of two double-pole, double-throw reversing switches wired in parallel. Useful for reversing section and turntable control on single-cab layouts, plus many other applications.

#205 - Connector

CONNECTOR #205

A device to turn electric power on or off to track section or accessories. It has three SPST on-off switches in parallel and can be coupled together in any number.

#220 - Controller

CONTROLLER #220

This Controller provides the simplest way to wire and control tricky reverse loops, wyes and turntables. It has reversing switches for two main line cabs plus a switch, selectable by either cab, for directional control on reversing loops, etc. Couples with the #215 Selector.

#56 - Switch Control Box

SWITCH CONTROL BOX #56

Controls Atlas (or other twin coil) switch machines with SPDT momentary action. Button position indicates turnout setting. It can be coupled together in any number without wiring. Switch identification labels are included.

#201 - Spade Tongue Solderless Connectors (24 pcs.)

SPADE TONGUE SOLDERLESS CONNECTOR #201

A handy small electrical hook-up connector designed for tight spaces. Used for #18-22 wire and #3 screw post. Maximum width is .218", 24 pieces per package.

SNAP RELAY #200

The Snap-Relay is a double-pole, double-throw relay with actuating mechanism driven by a momentary-power twin coil solenoid (A solenoid is a cylindrical coil of insulated wire in which an iron core is made to move back and forth by a flow of electric current). With just a few simple connections, this small device, which may be mounted anywhere, can:

- Power the frogs on Atlas' Code 83 #6 & Mark 3 turnouts in "HO" or Atlas O 2-Rail switches
- Control trackside signal lamps to show turnout point positions
- Operate control panel lamps to show settings of remotely located turnouts (switches)
- Provide selective track siding control; sidings are powered only when points are aligned for siding; siding remains "dead" when points are set for the main line
- Control X-sections automatically; this very useful track arrangement is thoroughly discussed in The Complete Atlas Wiring Book (Item #12)
