# ORDERING INFORMATION & TERMS

February 2019

Dear Model Railroader,

Welcome to the February 2019 Atlas ASMC consumer edition of product Announcements and Arrivals. This All Scales Monthly Catalog (ASMC) is the core of our guaranteed pre-order system. Prior to the start of supplier production, Atlas announces to authorized dealers, distributors and e-subscribers that we are ready to take orders. This notification comes in the form of Atlas' All Scales Monthly Catalog (ASMC) which focuses in on the current month's planned and specified announcements and allows consumers to place guaranteed pre-orders with their local hobby shop for those specific products by a given date. If you need assistance finding a dealer near you, don't forget our Hobby Store Locator! Check out the locator at <http://shop.atlasrr.com/storeLocator.aspx>. You can also view and reserve products via Atlas' online store [shop.atlasrr.com](http://shop.atlasrr.com).

We're showing modelers the love this month with exciting announcements and arrivals in all scales. More brand new models are being announced in N scale – 41' Ballast Hoppers and 50' Sieco Pulpwood Flat Cars along with new paint schemes on our N scale 17,360 Gallon Tank Cars. HO modelers will delight in New Paint Schemes and returning favorites on the GP 38/40 Locomotive, as well as 17,360 Gallon Tank Cars and 42' Coil Cars. O Scalers are getting a real pick me up with the announcement of the O Scale Ford® F-100 and a new run of fantastic paint schemes on our 42' Coil Cars - you'll find all of those wonderful models and more inside, as well as arriving locomotives, rolling stock and track in all scales.

We hope that you and your customers enjoy the product selections on the pages within, and as always, thank you for your continued support of Atlas!

Sincerely,  
Joe Kolnoski  
Vice President of Sales

### PROTOTYPE INFO:

In the 1950s Pullman-Standard began offering new standard designs for their coal hoppers. One of these was the 70-ton three bay coal hopper with a rated volume of 2,750 cubic feet. The carbody had sixteen side posts and was available with and without heap shields. Later an 80-ton version was offered using the same length frame but having a taller body with a rated volume of 2,960 cubic feet. The cars were built from 1954-1960 (2750 cf) and 1964-1971 (2960 cf).

### PROTOTYPE INFO:

A member of the most regulated division of the freight car community, tank cars are used to transport both hazardous and non-hazardous materials along the rails. The 17,360 Gallon Tank Car began appearing in the 1970's and onward. A variety of chemical and private leasing corporations were the majority owners of the 17,360 gallon tank cars. Many of these cars still exist and still wear a variety of reporting marks and data configurations.

### PROTOTYPE INFO:

For railroads, the maintenance of their tracks and right of way is a pivotal part to their success and safety. In order to keep a well-balanced and smooth roadbed means a good portion of ballast must be laid down and reapplied when necessary. Usually a string of ballast hoppers are called in for this job. Unlike a regular open top hopper car, ballast hoppers have specialized gates at the bottom of the bed that allows the ballast to be spread to the sides of the rail. Most railroads had their own fleet for this matter, but also will lease from companies such as Herzog, which owns a large fleet of ballast hoppers. The Atlas 41' Ballast Hopper will help your railroad accomplish necessary track work.

### PROTOTYPE INFO:

The pulpwood car was designed out of necessity, as previous logging style cars were rebuilt out of boxcars or gondolas. The new design made it easy to haul tree trunks, branches, and other cuts stacked in rows of two (with the ends facing out) between two bulkheads bracketing each end. The Atlas 50' Pulpwood Car was modeled after a SIECO design, with over 800 delivered in the early 1970s to the Southern Railway, alone. Over time, as demand for pulpwood at mills has slowly decreased, these cars still serve a vital purpose, hauling logs, telephone poles, and other long objects lengthwise between the two bulkheads. The Atlas 50' SIECO Pulpwood Flat would fit in on your railroad hauling more pulpwood to the mill or bringing a load of logs out of the forest to be cut down.

HO SCALE

## ATLAS MASTER® HO GP38/40 LOCOMOTIVE

Ordering: <https://shop.atlasrr.com/d-528-february-2019-ho-preorders.aspx>

Gold Models  
with ESU Sound

Bangor and Aroostook

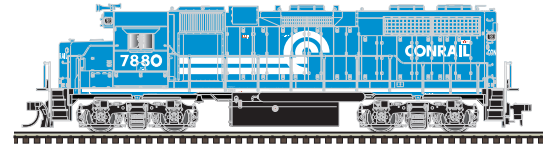

In 1966 EMD introduced a new line of locomotives based on the 16-cylinder 645-series prime mover. The "40-series" included a six-axle and four-axle model, the latter being the GP40. A total of 1,145 units were produced between 1966 and 1972. These turbocharged 3,000hp locomotives were used primarily in road freight service. The GP40 was a versatile locomotive that could be found across the US hauling drag freights over mountain passes and leading high-speed intermodal trains across flat terrain. Three rooftop radiator fans at the rear of the long hood differentiate a GP40 from its lower horsepower counterpart, the GP38, which has two fans at this location.

Concurrent with GP40 production, EMD offered a lower horsepower, non-turbocharged locomotive based on the same 645-series prime mover. The four-axle GP38 was rated at 2,000 hp and had the advantage of costing less than the GP40. A total of 727 units were produced between 1966 and 1971 when the model was superseded. The wheelbase of the GP38 was identical to that of the GP40. Both units shared the same EMD road-switcher style body that was introduced with the GP35 in 1963. A desire for standardization caused the GP38 to share the same wheelbase, frame and many external components as the GP40. The GP38 was purchased by large and small roads alike. It was routinely found in local and road freight service throughout the US. Many GP38s and 40s are still in service today, either having been rebuilt or modified. A locomotive that has withstood the test of time.

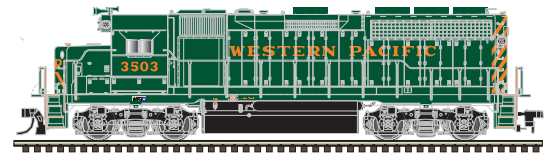

Many options exist on the Atlas GP38 and GP40 models. Some of these are: Long hood with or without dynamic brakes, multiple fuel tanks, high or shoot hoods, and more.

### MODEL FEATURES:

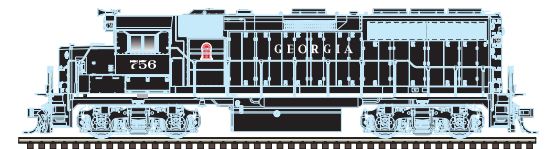

- Golden-white LEDs
- Realistic die-cast underframe
- Five-pole skewed armature motor with dual flywheels for optimum performance at all speeds
- Directional lighting
- Factory-equipped with AccuMate® knuckle couplers
- Detailed cab interior with crew
- Separately-installed scale windshield wipers, metal grab irons and fine scale handrails
- Movable drop steps
- Walkway safety tread
- Coupler cut bars

# NEW MODEL - ATLAS MA OFFICIAL PRE-ORDER ANNOUNCE

## NEW TOOLING

In 2013, Greenbrier Companies introduced their new design of 89' auto rack, the Multi-Max™. The new design allows for changing configurations from a Bi-Level to a Tri-Level (and back) without adding or removing decks. The racks are fully compatible with existing 89' auto racks. To this date, most of the racks have been built on Greenbrier Companies' own specially designed 89' flat cars. These cars are commonly seen in cuts of other similar autorack cars or a solid unit train of autorack cars. Currently, almost 10,000 cars (with racks) are running on North American rails. Atlas' rendition of the Multi-Max™ will feature multiple variations and road names. Stay tuned to Atlas' website for more information!

### PROTOTYPE INFO:

A member of the most regulated division of the freight car community, tank cars are used to transport both hazardous and non-hazardous materials along the rails. The 17,360 Gallon Tank Car is modeled after American Car and Foundry's insulated general service tank car and designed primarily for transporting chlorine, but were also seen hauling other chemicals, as well. This venerable car began appearing in the 1970's and onward. A variety of chemical and private leasing corporations were the majority owners of the 17,360 gallon tank cars. Many of these cars still exist and still wear a variety of reporting marks and data configurations.

+ Paint scheme correct for similar 42' open coil steel car

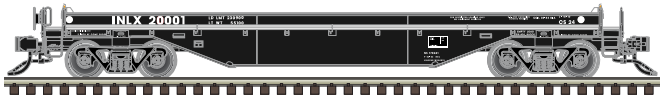

### PROTOTYPE INFO:

The increased volume of coiled steel transportation gave rise to a new purpose-built freight car. Previously rolls of coiled-steel had generally traveled in specially equipped gondola cars. In the 1960's a lighter type of car emerged specifically for hauling coils of steel in an integral trough. The car type gained popularity and eventually over 17,000 cars were built. Atlas' model replicates a 42' design with a distinctive fishbelly side sill, with many small detail parts applied. Many of these cars can be seen in small fleets on general manifest trains or in unit train service on rolled steel shuttle trains. An example of a unit train currently in service would be on Norfolk Southern, from an East Chicago, Indiana steel plant to a mill in western Ohio.

**PROTOTYPE INFO:**

1953 was the birth year for the Ford F-100 series of trucks. The designs were pivotal in Ford's line of pickups, as they made significant improvements and body changes which included the design being a bit more "boxy" with less curves. By 1973, Ford had advanced to the "Sixth Generation" of the F-series line. This venerable truck saw improvements over the previous generation's, with front disc brakes, gas tank relocation under the bed, better air conditioning and heating systems, and increased space inside the cab. The F-100 could be found almost anywhere, from commercial use, maintenance of way for railroads, public works, etc. Atlas' recreation of the F-100 would look right at home on your layout parked in a driveway, making a convenience store run, or in-service for the car department in a yard.
