PRE-ORDER ANNOUNCEMENTS - OCTOBER 2019

GUARANTEED PRE-ORDER DUE DATE: WEDNESDAY NOVEMBER 20TH 2019

ORDERING INFORMATION & TERMS

Dear Model Railroader,

Boo! If you need to scare up some fun on your layout this Fall, Atlas has all the locomotives, freight cars, track and more that you need! The Atlas All Scales Catalog October 2019 Edition features the latest product announcements, arrivals, and limited in-stock offers that will assist you in fulfilling your model railroad needs in 'all scales'.

Atlas is offering treats (not tricks) found throughout this catalog to meet your needs this coming winter. The latest N scale locomotive model to join the Atlas fleet is the Master line U25B locomotive. This model is offered in DC and DCC. An exciting spate of all new N scale rolling stock models available for pre-order includes the 33,000 Gallon Tank Car and NE-5 Cabooses and the second run of our highly sought after DIFCO Dump Cars. HO modelers shouldn't be scared, as a full complement of HO scale cars is here for the taking, including the Trainman GP38-2 Locomotive, 33,000 Gallon Tank Cars and the new 8-1-2 Passenger Cars. It will be hard for enthusiasts to contain their excitement over a long awaited run of new paint schemes on our N and HO scale 40' Refrigerated Containers. Last, but certainly not least, O scale is represented by Wagon Top Box Cars and Pullman Bradley Coaches. Please see the 'Table of Contents' on the facing page for scale specific models, details, and feature/order page locations.

This catalog lists recently arrived products as well as product arrivals that are due in warehouses soon, or have just arrived. These include a healthy variety of locomotives and rolling stock and much desired Atlas track and accessories in all scales. Please note that MSRPs listed within this catalog are currently valid, however; due to rapidly changing international trade negotiations and policy, tariff adjustments may be necessary. Notification of pricing adjustments for identified Atlas products will be made public as soon as possible after government confirmation of tariff implementation.

Happy Modeling,

Joe Kolnoski
Vice President of Sales

PROTOTYPE INFORMATION:

Atlas' high quality N scale locomotive is modeled after GE's U25B introduced in the 1960s. The U25B locomotives were a common sight on railroads across the country. This replica has the same high detail and standards you have come to expect from an Atlas locomotive.

MASTER MODEL FEATURES:

- Directional lighting
- Golden-White LEDs
- Blackened metal wheels
- Full pilots with body mounted AccuMate® couplers
- Crisp painting and lettering
- DCC versions feature NCE Decoders

PROTOTYPE INFORMATION:

Side Dump cars are a very versatile class of railroad car, designed to deposit their load to either side of the tracks, rather than between the rails like a ballast hopper. This feature is utilized by the railroads in maintenance-of-way roles for rapidly building up fills and cuts with stone, rip-rap or soil as well as for depositing ballast. Side dump cars are also used in revenue service hauling ore, limestone, gravel, and coal, in industrial settings hauling waste or recycling materials, and in mining operations. Their low sides enable easy loading of material, and their rapid discharge rates – some less than 10 seconds – and ability to take a lot of abuse have earned them the nickname of a “dump truck on rails”.

The Atlas DIFCO (Differential Steel Car Company) side dump car is modeled after the air-activated, all-welded construction, 50 cubic yard car which has been a familiar fixture on the rails both in the US and abroad from the late 1960s through today, and features prototypically accurate scale dimensions, roller bearing trucks, and knuckle couplers.

MASTER MODEL FEATURES:

- Prototypically accurate dimensions
- Accurate paint schemes
- 100 Ton roller bearing, truck mounted couplers

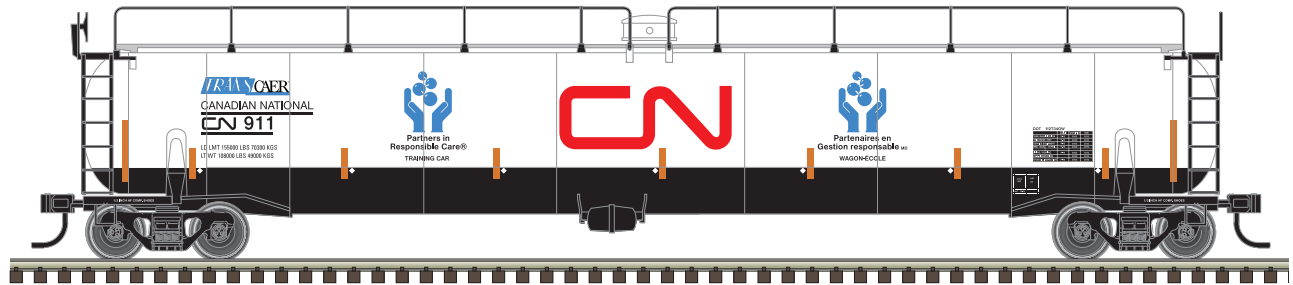

PRICES ARE SUBJECT TO A POTENTIAL PRICE INCREASE PENDING FUTURE TARIFF IMPLEMENTATION.

PROTOTYPE INFORMATION:

The ACF® "whale body" 33,156 gallon tank car was designed to haul liquefied petroleum gas (LPG) and anhydrous ammonia. Originally built in the early 1960s, you can still find these cars in service today.

MASTER MODEL FEATURES:

- Fine end ladders
- 100-ton roller bearing trucks
- Air reservoir
- Walkway and end platforms
- Intricate lettering on the ends
- Separate handrails
- Prototypically accurate paint schemes
- Minimum Radius: 9 3/4"

AccuMate® couplers are made under license from AccuRail, Inc.

PROTOTYPE INFORMATION:

This Atlas N scale model is based upon the Pullman standard Caboose design for the New Haven Railroad. The NE-5 caboose is typically associated with the New Haven Railroad but this body style was in fact used by other railroads as well. Boston & Maine, Chicago Great Western and New Haven were the only major railroads to purchase these cabooses new from Pullman Standard. The cabooses showed real longevity and were found in operation with other railroads well into the diesel era.

MASTER MODEL FEATURES:

- Finely detailed end rails, smokestack and ladders
- Brake line detail
- Weighted chassis
- Friction-bearing or roller-bearing caboose trucks as appropriate
- Factory-equipped with AccuMate® couplers
- Accurate painting and printing

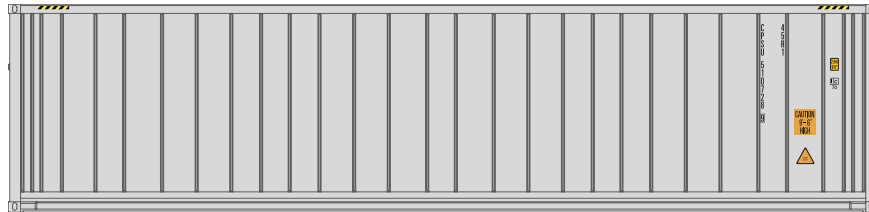

PRICES ARE SUBJECT TO A POTENTIAL PRICE INCREASE PENDING FUTURE TARIFF IMPLEMENTATION.

3 Packs Have Different Road Numbers

PROTOTYPE INFORMATION:

Since the 1970s most international freight has been shipped by standardized 20- and 40-foot containers. Some of this huge flow of cargo between countries needs to be refrigerated for the transit. The second most common type of ISO* container in use is the refrigerated container. Today's refrigerated container design uses high tech composite (plastics and metals) construction and a "picture frame" type refrigeration unit. Atlas' model represents a standard 40-foot high-cube refrigerated container (ISO Type Code 45R1) found in many shipping and leasing fleets.

*ISO is the International Organization for Standardization.

MASTER MODEL FEATURES:

- Prototypically accurate Daikin reefers
- 40-foot High-Cube Refrigerated Container
- Composite materials sandwich-sides design
- Detailed picture window refrigeration unit with separate parts
- ISO Type 45R1
- Five hinge / four bar doors with OUT style handles

TRAINMAN MODEL FEATURES:

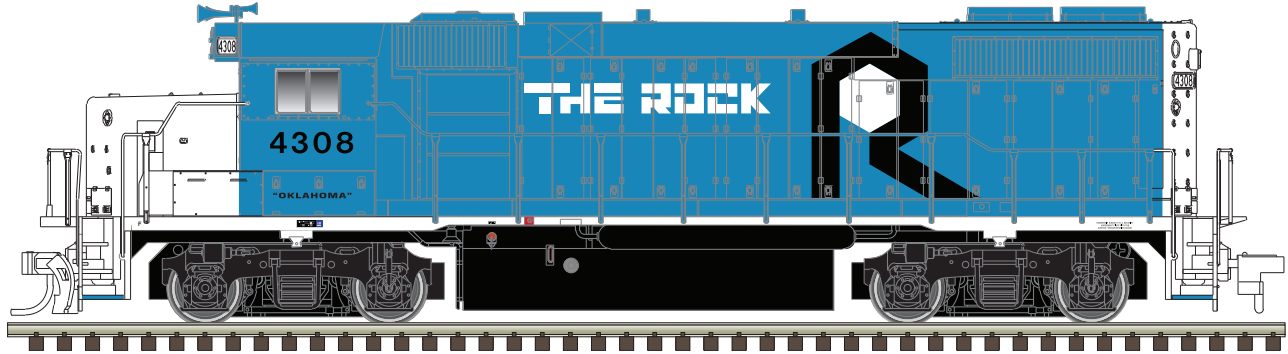

- The same drive as our basic Master Series™, in an affordable locomotive
- Five-pole skewed armature motor with dual flywheels
- Separately applied hand rails and end railings
- Matching cabooses available separately
- Locating dimples for grab irons
- True scale dimensions with accurate details
- Realistic die-cast underframes
- Equipped with AccuMate® Couplers
- As with our Master Series™ GP-38, this model features either a 2,600 or 3,600 gallon fuel tank, depending on the prototype.

PROTOTYPE INFORMATION:

The Dash 2 locomotive series, unveiled by EMD in 1972, featured significant changes, such as a solid-state, modular electrical control system and improved engine components designed to increase traction and reduce exhaust emissions. A reliable work-horse, the GP38-2 remains one of the most successful locomotives ever built. Most are still in service today.

Silver Sound Ready™

Atlas Silver Sound Ready models are equipped with a speaker for easy conversion to sound with the addition of a decoder. If you need assistance with the upgrade of a Sound Ready model, please contact Atlas Customer Service at 908-687-0880 or csdept@atlasrr.com

Silver Sound Ready™
Easy conversion to sound

ANALOG (DC) OPERATION FEATURES:

- The LokSound Select Dual-Mode decoder allows your Atlas Gold Series locomotive to be used on DC as well as on DCC layouts.
- Please note that the Atlas Quantum Engineer will NOT operate an Atlas Gold Series locomotive equipped with a LokSound Select decoder on an analog (DC) layout. However, the sound and lighting functions of the LokSound Select decoder in the Atlas Gold Series locomotive can be controlled by an easy-to-use basic DCC system
- Also note that on a DC-powered layout, a DCC and sound equipped locomotive (such as the Atlas Gold Series GP38-2) CANNOT be consisted with another locomotive that does not also have both DCC and sound. (This statement does NOT apply to DCC-equipped locomotives operating on a DCC layout.)

PRICES ARE SUBJECT TO A POTENTIAL PRICE INCREASE PENDING FUTURE TARIFF IMPLEMENTATION.

ATLAS MASTER® HO 8-1-2 PASSENGER CAR

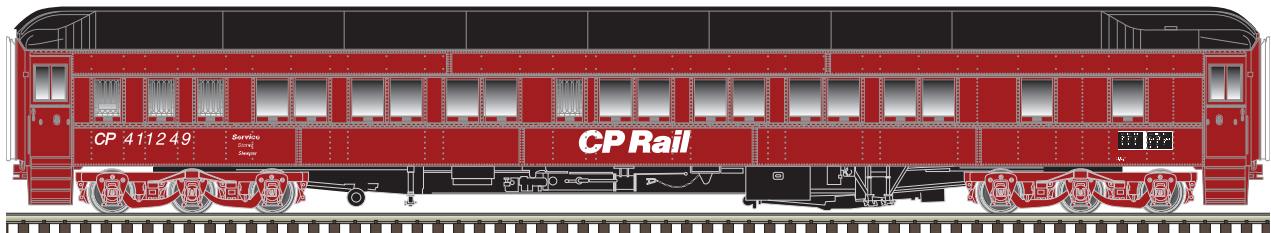

Ordering: <https://shop.atlasrr.com/d-566-oct-2019-ho-scale-pre-orders.aspx>

8-1-2 PASSENGER CAR HISTORY

Between 1920 and 1935, rail travel was at its height, and the Pullman Company reigned supreme in the production and management of sleeping cars nationwide. Over 9800 cars were in service, with approximately 55,000 passengers traveling somewhere in a Pullman car every single night. Passengers came from every economic and social class, and to meet the demands of this diverse clientele, while still providing a profitable service, Pullman introduced nearly 100 different floor plans for sleepers with varying amounts of privacy. While this may seem extreme today, the standardization of the basic car shell, mechanical equipment, and fixtures which resulted from the move to an all-steel construction in 1910 made this achievable. From the beginning, Pullman had favored a more open plan, consisting of "sections", which had two seats facing each other with a drop-down berth above. At night, the porter would convert the two seats into a bed for the passenger riding "forwards", and drop the upper berth into a bed which was used for the passenger riding "backwards" (which was the lower cost option). Sectional sleepers could carry more passengers, but lacked the privacy that more affluent customers wanted.

Pullman therefore introduced a wide variety of floor plans throughout the 20s and 30s which combined sectional and private rooms, or "compartments". The most widely accepted car, introduced in 1927, was Plan 3979 and its minor variations, configured as having 8 sections, 1 drawing room, and 2 compartments. The compartments for two included their own sink and toilet, and the drawing room added additional sleeping and living space beyond a compartment with a sofa bed. Combining these rooms into a suite was also possible for families or those wishing more private space. Air conditioning was added in the mid 1930s, and this configuration was quite successful with 250 cars produced.

Throughout the ten production lots of 8-1-2 sleepers, the "Cent" name series was the largest block, and was used on 79 cars (lots 6205, 6237, and part of 6283). Other common names found on 8-1-2 sleepers included the "Rock", "Pass", "Oak" and "Laurel" series, in addition to railroad-specified names, such as "Mountaineer", "Explorer", and "Trapper" used specifically on those Canadian Pacific named trains. In most cases, following the Pullman divestiture of car ownership in 1948, the railroads for whom these cars were originally produced purchased them outright and had them repainted during the 1950s to match and run with many of their newer lightweight name train schemes, such as the Texas and Pacific "Eagle", Illinois Central "Panama Limited", and the New York Central "Twentieth Century Limited". Depending on where the cars were finally (according to Pullman records) shipped, even standard colors could vary, with cars such as the Centgarde and De Young, now in Southern Pacific service, taking on the dark olive green unique to that railroad.

By the mid 60s, with the decline of passenger service, many of the 8-1-2 sleepers were re-tasked into use as MOW bunk cars, or sold for scrap. Nearly two dozen made their way to Mexico (mostly from the New York Central) to end their operational lives in the 1980s after 50 years of service. Of those that remain, the John McLoughlin is currently undergoing restoration at the Illinois Railroad Museum.

PROTOTYPE INFORMATION:

In 1927, the Pullman Company introduced its Plan 3979 sleeper. This design featured 8 sections, 1 drawing room, and 2 compartments in an attempt to balance the economy of sectional berths with an increased desire by travelers for more privacy options. The compartments, which included their own sink and toilet, provided enclosed travel for two, while the drawing room added sofa accommodation and floor space for an additional passenger. The arrangement of the rooms in the car also enabled the creation of suites for families or larger parties through connecting doors. The design proved very successful, with 250 cars being produced between 1927 and 1930. These 8-1-2 sleepers were found across the country in both pool service and dedicated assignments to many colorful name trains from the 30s through the early 60s, with several ending their careers in MOW service.

MASTER MODEL FEATURES:

- Full interior detailing
- Scale operating diaphragms
- Ice or Pullman Mechanical a/c as appropriate
- Full, separately-applied underbody detail (brake piping, steam traps, brake rigging, etc.)
- Scale window glass
- Detailed prototypical trucks with free-rolling metal wheels
- AccuMate® couplers
- **Recommended Minimum Radius: 24"**

3 Packs Have Different Road Numbers

PROTOTYPE INFORMATION:

Since the 1970s most international freight has been shipped by standardized 20- and 40-foot containers. Some of this huge flow of cargo between countries needs to be refrigerated for the transit. The second most common type of ISO* container in use is the refrigerated container. Today's refrigerated container design uses high tech composite (plastics and metals) construction and a "picture frame" type refrigeration unit. Atlas' model represents a standard 40-foot high-cube refrigerated container (ISO Type Code 45R1) found in many shipping and leasing fleets.

*ISO is the International Organization for Standardization.

MASTER MODEL FEATURES:

- Prototypically accurate Daikin reefers
- 40-foot High-Cube Refrigerated Container
- Composite materials sandwich-sides design
- Detailed picture window refrigeration unit with separate parts
- ISO Type 45R1
- Five hinge / four bar doors with OUT style handles

PRICES ARE SUBJECT TO A POTENTIAL PRICE INCREASE PENDING FUTURE TARIFF IMPLEMENTATION.

PROTOTYPE INFORMATION:

In the 1930s, the B&O was looking to add a fleet of box cars to their roster. Instead of turning to the well-known manufacturers at the time, they went with an in-house design. The Wagon Top box car was born and between 1934 all the way up to 1960, nearly 5000 similar examples were built by the B&O. The most notable feature of this car is the unique slopped down roof section, which was designed to not allow rain water to seep into the interior of the car. The Atlas Wagon Top Box Car captures all of these unique features, with superb printing, separate grab irons and durable body.

MASTER MODEL FEATURES:

- L: 10.5" W: 2.5" H: 4"
- Die-cast trucks and couplers
- Prototypically correct door styles per paint scheme
- Minimum Radius: 0-31 (3-Rail), 36" Radius (2-Rail)

TOTAL PIECES ORDERED			

Four road numbers available per road name.

**Bangor & Aroostook has TWO road numbers available per road name.*

+Paint scheme is correct for a car of a similar prototype.

PROTOTYPE INFORMATION:

The Osgood Bradley Company of Worcester, MA was founded in 1822 to build carriages and stagecoaches. The company began manufacturing railroad cars in the mid 1800s. Osgood Bradley was purchased by Pullman in the early 1930s. In 1934 the company developed a tubular carbody with a rounded roof end utilizing Cor-Ten steel, a lightweight copper-steel alloy. These new cars weighed 15 tons less than their non-lightweight counterparts. The New Haven Railroad was the first and the largest purchaser of these cars. Other purchasers included Boston & Maine, Bangor & Aroostook Railroad, Kansas City Southern, Seaboard Air Line, Cotton Belt and Lehigh Valley. These cars were used on both long distance and local trains and served well into the 1970s.

TRAINMAN MODEL FEATURES:

- Scale details and dimensions
- Rubber diaphragms
- Detailed interior with seating
- Interior lighting
- Separately-applied metal grab irons
- Functional doors
- Separate window glazing
- Vestibule ends with safety gates
- Minimum diameter curve: 0-45 (3-Rail); 0-54 recommended for better appearance.
- Minimum radius curve: 36" (2-Rail)

Unlettered car will be painted dark green with a black roof, but with no lettering or number printing.

PRICES ARE SUBJECT TO A POTENTIAL PRICE INCREASE PENDING FUTURE TARIFF IMPLEMENTATION.

TOTAL PIECES ORDERED			

PROTOTYPE INFORMATION:

Introduced by Pullman in the mid-1960s, the PS-4427 low side covered hopper became the backbone car for many of the large grain hauling railroads as well as the car of choice for many leasing companies. These cars are still in service today.

MASTER MODEL FEATURES:

- True 1/4" scale dimensions
- Full brake line details
- Opening hatches with full working latch assembly
- Separately-applied wire grab irons
- See-through roofwalks
- Sprung die-cast 100-ton roller-bearing trucks with rotating bearing caps
- Accurate painting and lettering
- Minimum diameter curve: 0-45 (3-Rail)
- Minimum radius curve: 36" (2-Rail)
