...and more fantastic Atlas products!

PRE-ORDER ANNOUNCEMENTS - FALL 2024

PRE-ORDER DUE DATE: WEDNESDAY JANUARY 8TH 2025

November 2024

Dear Model Railroader,

Atlas is celebrating the momentous occasion of our 100th Anniversary throughout 2024! Our year-long anniversary announcements continue with The Atlas 100th Anniversary Catalog, Volume 7. This edition of the All Scales Monthly Catalog (ASMC) is chock full of new announcements in N & HO scales.

The ASMC is the basis of the distinctive Atlas Pre-Order system. Before the Research & Development department gives the final go ahead for production, Atlas announces to its customers the products we are preparing to make. This announcement comes in the form of the ASMC that provides our customers with the opportunity to arrange pre-orders for their preferred products.

The Atlas 100th Anniversary Catalog, Volume 7 edition includes announcements of prototypical N and HO locomotives including the N Master SD35 and FA/FB-1 Locomotives along with HO Master C420s and B23/30-7s. We're also announcing plenty of prototype accurate rolling stock including N & HO scale 1932 ARA Box Cars, N 50' RBL Box Cars, HO Portec 3000 Hoppers and more. Brand new models being announced for the first time ever include: N scale CNCF 5000 Box Cars, HO Beer Can Tank Cars and the HO PSC Caboose.

While on the Atlas website, shop.atlasrr.com, be sure to peruse the "New Arrivals" pages to see what has recently arrived on Authorized Dealer shelves, or the In-Stock pages to see what is readily available from Atlas. Recently arrived and now available is Atlas' tried and true N scale True-Track, now with realistic gray roadbed! Take a look at the new roadbed color in the photos on the back cover of this catalog.

Need to do some track work? Atlas has all the pieces you need - from straights to switches and everything in between! Atlas can also help outfit you with a full layout package - check out shop.atlasrr.com for more information. We also offer a full line of instructional guides if you're looking to start fresh with a brand new layout! For a complete listing of our books, visit our website or inquire at your local hobby shop. For assistance finding an Atlas Authorized Dealer near you, use our handy Dealer locator at: <https://shop.atlasrr.com/storelocator.aspx>.

Don't miss out on all of the latest Atlas news, announcements, special offers and more. You can ensure that you receive the latest Atlas news delivered to your inbox by visiting shop.atlasrr.com and signing up for our email newsletter - *the Atlas Insider*.

Thank you for your interest and enthusiasm in the exceptional multi-scale product offerings produced by Atlas Model Railroad Company.

Happy Modeling,

Jarrett Haedrich, Executive Chairman

PRE-ORDER ANNOUNCEMENTS - FALL 2024

PRE-ORDER DUE DATE: WEDNESDAY JANUARY 8TH 2025

100 YEARS OF ATLAS HISTORY

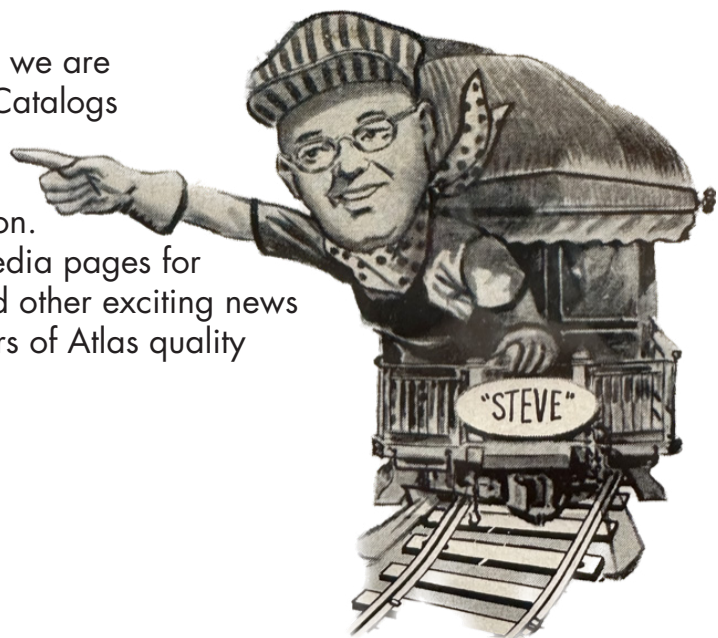

Atlas Tool Company was founded by Stephan Schaffan Sr. in 1924 as a general machine shop in a small garage at 330 Waverly Avenue in Newark, New Jersey. His son, Stephan Schaffan Jr. joined him in the business in 1933. As a frequent visitor to the local hobby shop, he would often ask the owner if there was anything he could do to earn some extra spending money. Tired of listening to his requests, the hobby-store owner threw some model railroad track parts his way and said, "Here, see if you can improve on this".

In those days, railroad modelers had to assemble and build everything from scratch. Steve Jr. created a "switch kit" which sold so well, that the entire family worked on them in the basement at night, while doing business as usual in the machine shop during the day.

Not long after, Steve Jr.'s accomplishments include engineering the stapling of rail to fiber track, inventing the first practical rail joiner and pre-assembled turnouts and flexible track—all of which helped to popularize model railroading and assisted in the creation of a mass-market hobby. As the business grew, their manufacturing needs went beyond what the small garage could provide, so in 1947 Steve and his father had the first factory built in Hillside, New Jersey at 413 Florence Avenue. On September 30th, 1949, Atlas Tool Company Inc. was officially incorporated as a New Jersey company.

Over time Atlas, has expanded their product line to include much more than just track. At your local hobby store you can pick up Atlas track, locomotives, freight cars, signals, lighting and more in HO, N, O and even Z scale.

To mark the 100th anniversary of Atlas, we are publishing special edition Anniversary Catalogs throughout 2024. This catalog, featuring HO & N scale products is Volume 7 of our Anniversary Collection. Stay tuned to our website and social media pages for future Anniversary Catalog releases and other exciting news that we have planned to mark 100 years of Atlas quality and innovation!

PRE-ORDER ANNOUNCEMENTS - FALL 2024

PRE-ORDER DUE DATE: WEDNESDAY JANUARY 8TH 2025

ATLAS 100 YEAR ANNIVERSARY ENGINE

We recently announced ALP-45DP locomotives and Bombardier passenger car models decorated in special 100th anniversary paint schemes that celebrate our long history. What makes it even more memorable is that residents and visitors in the New Jersey area can now see an actual locomotive wearing the Atlas 100 anniversary scheme thanks to our partnership with NJ TRANSIT. NJ TRANSIT #4503 has been wrapped with our commemorative 100 anniversary artwork, and is now in service on select NJ Transit routes.

Note: The pre-order period for these models has closed. However, we will continue to accept orders and will fulfill as many as possible but these can not be guaranteed.

Multi-Level Cab Car - NJ TRANSIT/Atlas 100th Anniversary

Multi-Level Trailer - NJ TRANSIT/Atlas 100th Anniversary

Multi-Level Trailer with Toilet - NJ TRANSIT/Atlas 100th Anniversary

TOTAL PIECES ORDERED					

During the 1960s the demand for high HP locomotives drove EMD and competitor GE to continue to push the limits of locomotive design. During the time when 3,000 HP 16-cylinder prime movers were the norm, EMD made the decision to introduce a 20-cylinder, 3600 HP design. Introduced in 1965, the SD45, with its distinctive flared radiator design, was purchased by many major US railroads, totaling over 1,200 units until the SD45-2 replaced it in the EMD catalog in 1972. The SD45 did have some teething problems, most notably crankshaft failures. EMD did provide a means to remedy this issue, but some railroads chose to derate the SD45 to 3,000 HP, or in some cases replace the prime mover with the 16-cylinder 3,000 HP as utilized in the SD40-2. Most railroads decided that the extra 600 HP was pushing the limits of the 645 prime mover and preferred the reliability of the 16-cylinder design. The SD40-2 proved to be the best choice for many railroads. It would take a new design, the 710 series prime mover first featured in the SD50, for EMD to reach past 3,000 HP once again. Many units are still in service today, most being rebuilt as mentioned. Some did retain the stock 20-cylinder prime mover, a beefed-up engine block mitigated crankshaft failures. Quite a few examples exist in museums, proving that despite some problems the EMD SD45 remains a popular locomotive.

Features:

- Golden-white LEDs
- Painted safety rails
- Directional lighting
- Blackened metal wheels
- Magnetic knuckle couplers

TOTAL PIECES ORDERED					

ALCO built a total of 131 Century 420 locomotives between 1963 and 1969, when the builder ceased all new locomotive production. Powered by a 12-cylinder, turbocharged, 2,000-hp 251-series prime mover, the C420's direct competitor in 1963 was the EMD GP18. In fact, EMD did not offer a 12-cylinder, 2,000-hp prime mover until the GP39 model was produced in 1969. The shorter 12-cylinder engine block allowed the C420 to have its distinctive set-back cab and extended short hood. The first road to purchase the C420 was the Lehigh & Hudson River, with its first two units built in 1963. The largest fleet was purchased by the Long Island Railroad, with 30 units built between 1963 and 1968. All were equipped with a high short hood which housed a steam generator for passenger service. Over time, the largest fleet of C420s was amassed by the Louisville & Nashville. While only 26 units were purchased new, their total fleet grew to well over 60 units through mergers and acquisitions. The C420 can still be found in daily service today in the US. Currently the largest fleet of C420s is operated by the Arkansas & Missouri Railroad.

Features:

- Flat or "step" pilots used where appropriate
- Long hood with or without dynamic brake used where appropriate
- 3,100 or 2,400 gallon fuel tank used when appropriate per road name
- Separately-applied coupler cut levers
- Painted safety rails
- Dual flywheels
- Directional lighting
- Blackened metal wheels
- Factory installed AccuMate® magnetic couplers

PRE-ORDER DUE DATE: WEDNESDAY JANUARY 8TH 2025

ATLAS MASTER® N FA/FB-1 LOCOMOTIVE WITH LARGE NUMBERBOARDS

Spokane, Portland & Seattle

Union Pacific

The FA Cab Unit locomotives series was introduced in the late 1940's, under a partnership from the American Locomotive Company and General Electric. At the height of "Cab Units", this was ALCO's foray into the market. The "F" designation meant their design and usage would be best suited for "Freight", although the FA and matching FB "Booster" unit could be seen in service almost anywhere. Over 600, 400 of them being FA's, were built from 1946 to 1956. Many of these saw service, after being sold from their original purchaser. The Atlas FA and FB-1 will capture that rugged look of a road train fighting up a hill with a large assortment of tonnage behind it.

Features:

- Accurate lettering and crisp detailing
- Powerful motor
- Finely detailed body
- Durable metal wheels
- Directional LED's (Where appropriate)
- Next18 Decoder Plug
- Two versions available: Single and Double headlights where appropriate per roadname.

SILVER SOUND READY FEATURES (SILVER LOCOMOTIVES ONLY):

- Sound ready & equipped with speaker for easy conversion to DCC sound.
- Next18 Decoder Plug

DCC OPERATION FEATURES (GOLD LOCOMOTIVES ONLY):

- Supports all DCC-programming modes; DCC includes RailCom and RailComPlus, with 14, 28 or 128 speed steps and with 2-digit and 4-digit addressing.
- Flexible mapping of function keys F0 to F28.

		TOTAL PIECES ORDERED			

Nearly 1,500 Mexican built CNCF 5000 Boxcars were ordered by U.S. railroads in the late 1970s as part of the "IPD" incentive per diem boxcar boom. This was the peak of U.S. modern freight car production, however it wasn't just limited to the U.S. builders as multiple U.S. railroads opted to purchase the 70-ton 50-foot boxcar from the Mexican freight car builder CNCF. Thousands more CNCF 5000 boxcars would be built for Mexico's national railways in the 1980s as well. These 5000 cubic foot boxcars still roam the rails of U.S., Canada, and Mexico to this day. The CNCF 5000 has many unique spotting features from the triangular supports above the door post, to the wrapped end sheets and the sharp notches in the sill near the stirrups. This iconic boxcar is a must have for any model railroader focused between the late 1970s and present day.

Features:

- Ready-to-run
- Full under body detail with brake rigging
- Separately applied wire grabs
- Detailed end ladders and brake gear
- Accurate painting and printing
- Blackened metal wheels
- Metal Couplers

Multiple Variations Include:

- 2 body styles: Early with bolts, late welded body (2 side slides)
- 2 end slide styles: standard 3 sheet Dreadnaught end, Bifurcated "X" pattern end
- 5 Door styles: Youngstown, Youngstown w/pick lever, Modified Youngstown, Superior and ICG shop Door.

This 50' General American Corporation RBL (AAR class for an insulated bunkerless refrigerator car with loading devices), designed in the early 1960s, was revolutionary for its all welded body construction and wide variety of load restraining devices available to customers. These cars were designed for transporting goods that needed to be shielded from extreme temperature variations. While initially used to transport canned goods and newsprint, the cars became very popular for shipping beverages and perishables. While not providing actual refrigeration a refrigerated load could expect to hold its temperature within a few degrees for several days in transit.

Features:

- Ready to run
- Injection molded plastic
- Fine scale detail
- Separately applied wire cut levers
- Etched metal roofwalks
- Crisp painting/printing
- Etched metal crossover platforms
- Metal Wheelsets

TOTAL PIECES ORDERED					

In the 2000s intermodal containers came in a large variety of shapes and sizes. Common containers in that time ranged from 20', 28', 40', 45', 48' and 53'. This much variety was deemed inefficient by railroads and trucking companies alike in the early part of this decade. Today the most common containers are either 20', 40' and 53'. With the phasing out of the once popular 48' containers, TTX had little need for their 48' well cars. These cars were still rather new, most built in the mid to late 1990s. So instead of scrapping cars that were in serviceable condition, TTX opted to start a rebuilding program in which the 48' well cars were shortened to 40's and/or lengthened to 53's.

Features:

- Die-cast body
- Detailed brake lines
- Detailed air reservoir
- Separate hand grabs
- Etched metal walks
- Minimum radius: 12 1/2"

**Our previously announced
40' Standard Height Containers
are a great fit for these Well Cars!**

This is a model of an ACF® Industries built general-purpose, single-compartment, 23,500 gallon, insulated, coiled, non-pressurized tank car. Our model represents cars built from 1969 and still in service today. A wide variety of products can be transported in this size and type of tank car. This includes asphalt, ethanol, fuel oil, metal sodium, molten phenol, paraffin wax, tallow, urethane polyol, and vegetable oil.

Features:

- Separately molded brake line plumbing
- Ultra-thin handrails
- Tank fittings and safety placards
- 100-ton roller-bearing trucks
- Brake wheel chain detail
- Accurate painting and lettering
- Factory-installed AccuMate® magnetic knuckle couplers

TOTAL PIECES ORDERED					

A goal of the American Railway Association (ARA) in the early 1920s was to produce an all-steel box car that could be recognized as a standard by the member railroads. Although the original design presented in 1923 produced in excess of 60,000 cars, it wasn't until a new design was presented in 1932 that the member railroads gave their approval.

After extensively testing five prototypes in 1933, over 14,500 cars were produced for twenty-three railroads throughout the following decade. This design soon evolved into the 1937, Modified 1937, and Postwar AAR box cars.

Although not the most popular design produced, numerically speaking, the 1932 ARA Standard box car is considered one of the most important designs in railroad history.

Features:

- Accurate painting and printing
- Friction-bearing trucks
- AccuMate[®] couplers

ALCO built a total of 131 Century 420 locomotives between 1963 and 1969, when the builder ceased all new locomotive production. Powered by a 12-cylinder, turbocharged, 2,000-hp 251-series prime mover, the C420's direct competitor in 1963 was the EMD GP18. In fact, EMD did not offer a 12-cylinder, 2,000-hp prime mover until the GP39 model was produced in 1969. The shorter 12-cylinder engine block allowed the C420 to have its distinctive set-back cab and extended short hood. The first road to purchase the C420 was the Lehigh & Hudson River, with its first two units built in 1963. The largest fleet was purchased by the Long Island Railroad, with 30 units built between 1963 and 1968. All were equipped with a high short hood which housed a steam generator for passenger service. Over time, the largest fleet of C420s was amassed by the Louisville & Nashville. While only 26 units were purchased new, their total fleet grew to well over 60 units through mergers and acquisitions. The C420 can still be found in daily service today in the US. Currently the largest fleet of C420s is operated by the Arkansas & Missouri Railroad.

Features:

- Flat or "step" pilots used where appropriate
- Long hood with or without dynamic brake used where appropriate
- 3,100 or 2,400 gallon fuel tank used when appropriate per road name
- Separately-applied coupler cut levers
- Painted safety rails
- Dual flywheels
- Directional lighting
- Blackened metal wheels
- Factory installed AccuMate® magnetic couplers

SILVER SOUND READY FEATURES (SILVER LOCOMOTIVES ONLY):

- Sound ready & equipped with speaker for easy conversion to DCC sound.
- NMRA 21-pin plug for DCC (Decoder-ready)

DCC OPERATION FEATURES (GOLD LOCOMOTIVES ONLY):

- Supports all DCC-programming modes; DCC includes RailCom and RailComPlus, with 14, 28 or 128 speed steps and with 2-digit and 4-digit addressing.
- Flexible mapping of function keys F0 to F28.
- A total of 6 DCC function outputs are available, and all can be function mapped (disable, brightness, light effects) individually
- Follows all NMRA DCC standards and recommended practices.

SOUND FUNCTIONALITY FEATURES (GOLD LOCOMOTIVES ONLY):

- Over 20 sound effects are available, including engine start-up and shutdown, prime mover sounds through all eight notches, bell, air horn, air compressor, dynamic brakes and more. **CSX Licensed Product*
- There are up to 16 user-selectable horns, 2 user-selectable bells, and 2 user-selectable synchronized brake squeals.
- Equipped with ESU's Exclusive "Full Throttle" features for ultimate realism in prototype running.

AccuMate® couplers are made under license from AccuRail, Inc.

General Electric's "Dash 7" locomotive line was introduced as a replacement for the older "Universal-Series" of the 60s and early 70s. "Dash 7" series improvements included increased fuel efficiency, tractive effort and reliability. The B23-7 was a direct replacement for the 2,250HP U23B model, while the B30-7 replaced the 3,000HP U30B. The first B23-7s were produced for Conrail in September, 1977, and the first B30-7s were produced for Frisco three months later. B23-7 production continued through 1984, with a total of 535 units built. Conrail was the largest purchaser of the model, with a total fleet of 141 units. 199 B30-7s were produced through 1981, with the combined fleets of Southern Pacific and Cotton Belt being the largest at 110 units. Several features distinguished B23-7s and B30-7s from predecessor models. The long hood stepped outward in the area of the exhaust stack to accommodate a relocated oil cooler. In addition, the frame was 2 feet longer than that of the U23B. An FB-2 style truck was offered as standard equipment, but some railroads opted to use "trade-in" trucks. Therefore, AAR type B and Blomberg trucks could be found on some models. Six power assembly doors (located near the center of the long hood) indicated that the B23-7 was powered by a 12-cylinder GE FDL engine. Eight power assembly doors in the same location help to identify the B30-7, which included a 16-cylinder FDL engine.

Features:

- Pilots with and without anti-climber
- Cab headlights or low-nose headlights
- Cab with 4 or 2 side windows
- Bell mounted under the sill or on the long hood
- FB-2, AAR type B, or Blomberg truck side-frames as appropriate
- Separately-applied scale detail parts
- See through step detail on sill
- Etched metal radiator grilles
- Painted crew members
- Factory-equipped with AccuMate® knuckle couplers
- Coupler pocket designed to accept AccuMate® Proto-couplers
- Five-pole skewed armature motor with dual flywheels
- Directional lighting

Wired speaker and enclosure included for easy conversion to sound.

The phrase “form follows function” is central in the design and manufacture of prototype freight cars. Tank cars, which came into being as early as 1865 to transport crude oil, now have numerous configurations and sizes based on the commodity they are intended to carry. The original wooden tanks were rapidly replaced by riveted, then welded, steel or aluminum (although wooden cars were still being produced for the vinegar trade up through the late 1960s!), and incorporated many features to enable this general type of car to carry over 100 different types of liquids, gases, slurries, suspensions, etc.

One of the more visually interesting (and generally misunderstood) cars appeared in the mid to late 1960s. Carrying anywhere from around 7500 to 11,000 gallons, these AAR T102 / T103 cars were extremely tiny at less than 40 feet long (mostly between 28-36 feet), and resembled a jelly bean or beer can on wheels. Many designs were unpressurized, and were heavily utilized by the oil industry, specialty chemical manufacturers, foodstuffs, and solubilized metals suppliers. Contrary to what one might think, these cars were not for small load shipments, but for carrying extremely dense or heavy liquid loads such as asphalt, oil production chemicals, lead gasoline additives (anti-knock), thick molasses and tallow, or chlorinated / brominated solvents. The size of the car (and the corresponding stub-sill and bolster design) was better able to distribute the weight to the rails safely than would a longer or larger car design.

The Atlas Master HO 10,000 Gallon GATX “Beercan” tank was developed from prototype plans in cooperation with GATX, and features angled or rounded ladders, steam jacketed or standard gravity outlets, and new Barber S-2-A trucks.

Features:

- Angled or rounded ladders
- Standard gravity and steam-jacketed outlets
- Barber S-2-A trucks
- Photoetched metal details
- Separately applied piping and grab rails
- Metal couplers

Built between 1979 and 1984, the Portec 3000 Hopper was designed to haul heavy bulk commodities such as sand, cement, salt and grain. Boston & Maine was one of the first railroads to purchase these in quantity. The Portec 3000 proved to be a very reliable design, many are still in service today.

Features:

- Ready to run
- Injection molded plastic
- Fine scale detail with many separately applied parts
- 2 Body and roofwalk variations to accurately match the prototype
- 2 styles of vibrator brackets
- Highly detailed end cages and brake gear
- 100 Ton Trucks
- Metal Couplers
- Etched metal roofwalks and end platforms
- Crisp painting and printing

DCC Ready!

Prior to the invention of "End of Train Devices" in the early 1970s, the familiar caboose served not only as an indicator of the rear of a train, but also as a mobile office and home for the conductor and train crew during layovers. On many roads, including the Canadian National and Canadian Pacific, cabooses (or "vans") were assigned to specific crews, requiring them to be switched out at division or crew change points. During the 1960s, however, CN and CP began to replace using "assigned" caboose operations with "run-through" vans, requiring the crew to change out and layover in bunkhouses or other lodging while the van remained with the train.

To meet the needs of run-through operation, CN embarked on a building program for a more modern van at their Pointe Ste. Charles shops. These vans were built from existing boxcar underframes and side panels and were outfitted with axle generators and batteries for electricity, with some eventually receiving diesel generators. Over their years of operation, these CN vans were found not only in domestic, but in international service as well, where their distinctive yellow cupolas stood out. By 1991, however, vans were phased out on Canadian railroads in favor of the "sense and braking unit", or SBU, however many of these vans had by then found new life on provincial rails and even on US short lines. There are several still in existence in both museums and personal collections across Canada and the US, as well as in operation on industrial and short lines.

Features:

- Newly upgraded tooling
- DCC-ready
- Interior and directional lighting, including operating classlights, steplights and inspection lights
- Separately applied grab irons and other details
- Underbody and interior detail
- Accurate paint schemes

This is a model of an ACF® Industries built general-purpose, single-compartment, 23,500 gallon, insulated, coiled, non-pressurized tank car. Our model represents cars built from 1969 and still in service today. A wide variety of products can be transported in this size and type of tank car. This includes asphalt, ethanol, fuel oil, metal sodium, molten phenol, paraffin wax, tallow, urethane polyol, and vegetable oil.

Features:

- Separately molded brake line plumbing
- Ultra-thin handrails
- Tank fittings and safety placards
- 100-ton roller-bearing trucks
- Brake wheel chain detail
- Accurate painting and lettering
- Factory-installed AccuMate® magnetic knuckle couplers

TOTAL PIECES ORDERED					

A goal of the American Railway Association (ARA) in the early 1920s was to produce an all-steel box car that could be recognized as a standard by the member railroads. Although the original design presented in 1923 produced in excess of 60,000 cars, it wasn't until a new design was presented in 1932 that the member railroads gave their approval.

After extensively testing five prototypes in 1933, over 14,500 cars were produced for twenty-three railroads throughout the following decade. This design soon evolved into the 1937, Modified 1937, and Postwar AAR box cars.

Although not the most popular design produced, numerically speaking, the 1932 ARA Standard box car is considered one of the most important designs in railroad history.

Features:

- Accurate painting and printing
- Friction-bearing trucks
- AccuMate® couplers

This model represents a typical Association of American Railroads car type code J311, with a load limit greater than 185,000 lbs, depressed bottom, and 36' to 48' interior length. Typical of these cars is the rotary coupler usually signified by a contrasting colour on one or, both ends. The Trainman® model has thirteen side stakes and a double tub bottom. Gross Rail Loading is rated at 286,000 lbs.

Features:

- True scale dimensions with accurate details
- Equipped with AccuMate® Knuckle Couplers.
- Accurate painting and lettering
- Weighted underframes
- Trucks equipped with free-rolling wheels

AccuMate® couplers are made under license from AccuRail, Inc.

Z scale is one of the smallest available model railroad scales at a ratio of 1:220. Atlas recognizes the growing interest in Z scale with track offerings and the recent introduction of rolling stock. Z is an optimum size for modelers with space limitations. Relative size of a Z scale model is depicted below using a hand painted model and a US Quarter.

The Evans 53' Double Plug Door (DPD) box car was manufactured during the 1960s and 1970s by Evans Products. Commonly used for transporting lumber and paper goods, the RBL (AAR class for an insulated bunkerless refrigerator car with loading devices) classification also allowed for the transport of canned goods and other food products. The double 8' doors eased the loading and unloading process of large cargo.

Due to their versatility the Evans DPD box car remained in service for many decades.

Features:

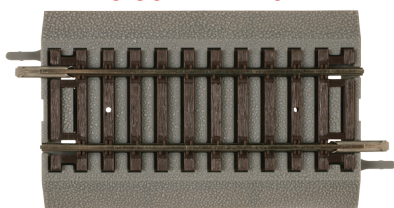

- Ready to run
- Crisp painting and printing
- Detailed die cast underframe
- Metal wheelsets
- Knuckle style couplers

Put Your Trains on the Right Track!

With time tested, modeler approved Atlas HO & N scale track!

Whether you're finishing an existing layout, starting a new one, or just giving that trainset loop some extra pieces, Atlas has the 'right track' for you. The rugged plastic construction, nickel silver rail and U.S. prototype detail, assures longevity, maximum conductivity and accurate realism that guarantees your trains look good and keep running smoothly. Atlas track provides industry leading **quality** at unequalled **value**, and our **selection** is so large we have an entire catalog devoted to it. HO and N scale track, in a variety of rail sizes, is fully stocked and ready to ship to you and your favorite Atlas authorized dealer now. For more information, and the dealer nearest you, visit shop.atlasrr.com and request a catalog of your own. And remember... *You're on the right track...with Atlas!*

HO SCALE TRACK

HO True-Track®

Atlas HO True-Track® has true-to-life gray gravel bed, correctly angled roadbed shoulders and features Atlas Code 83 Snap-Track®.

HO Code 83

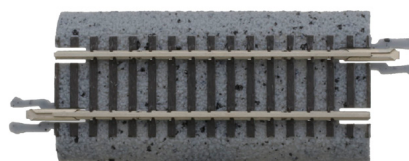

Atlas HO Code 83 track features prototypically-fine brown ties and nickel silver rail, and not only looks realistic but is incredibly reliable.

HO Code 100

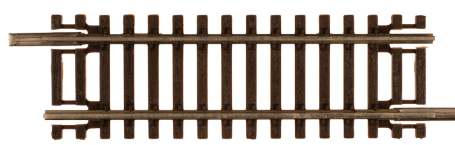

Atlas HO Code 100 track features black injection molded plastic ties and solid nickel silver rail, and is suitable for all skill levels.

N SCALE TRACK

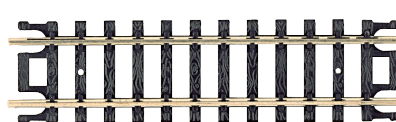

N True-Track®

Atlas N True-Track® features Code 65 rail & dark brown ties with prototypical spacing and is now improved with true-to-life gray gravel bed making it even more realistic!

N Code 55

Atlas N Code 55 track features simulated wood brown ties and smaller nickel silver rail, and is praised for its superior design and ease of use.

N Code 80

Atlas N Code 80 track features black ties and nickel silver rail, and is built to last for ultimate performance.

ATLAS SUPER-FLEX® TRACK

- Item #168 HO Code 100 Super Flex Track
- Item #500 HO Code 83 Super Flex Track
- Item #2000 N Code 55 Super Flex Track
- Item #2500 N Code 80 Super Flex Track

Invented and patented by Atlas founder Stephen J. Schaffan Jr., this innovative, finely engineered precision track is the first choice of experts who demand the best. Easy to install, Super-Flex Track® enhances the realism of your layout. Unlike other flexible track which can become inflexible and kink, Atlas' Super-Flex Track® can be formed and re-formed with ease to achieve the desired shape. This unique track can be shaped to form curves of any radius, is ideal for spiral easement curves and is easily manipulated to help you make your layout vision a reality.

**ATLAS
SUPER-FLEX® TRACK**
the original and still the best.

ACCEPT NO IMITATORS.

ATLAS MODEL RAILROAD CO, INC. • 378 Florence Ave., Hillside, NJ 07205 • shop.atlasrr.com

No Matter the Scale, No Matter the Size

Atlas Has the Layout For You!

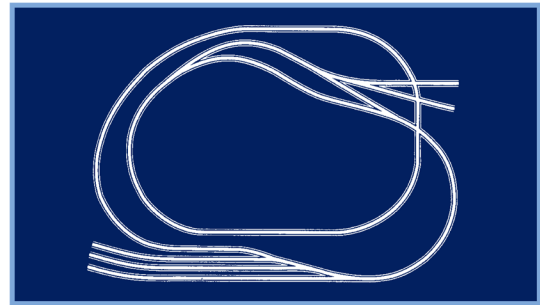

N TRUE-TRACK: NTT-6 PORT READING TERMINAL

From web site: www.atlasrr.com **Minimum Table Size Required:** 3' x 6'

Products Required: Straight sections, radius sections, turnouts, a crossing, bumpers, insulated joiners, terminal joiners and a selector

The Port Reading Terminal is a figure eight in disguise. This 66" X 32" layout incl. a mainline run as well as a small yard and three industrial sidings with room to expand. This layout is designed with two operators in mind. One can be switching the yard located at the front of the layout while the other can run mainline freights, allowing for continuous mainline running with no waiting.

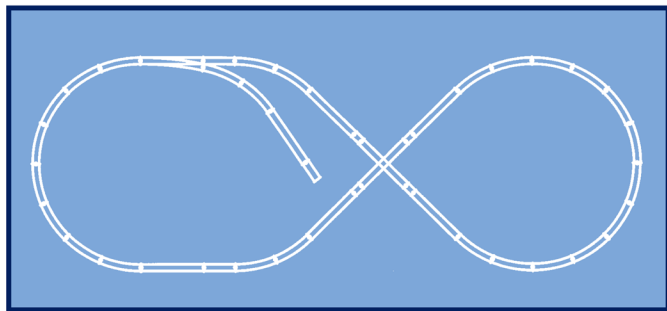

N CODE 80: N-7 TWICE AROUND VIA "UP & OVER"

From Book #6: *Introduction to N Scale Model Railroading*

Minimum Table Size Required: 32" x 45"

Products Required: Straight sections, radius sections, turnouts, a crossing, bumpers, insulated joiners and terminal joiners, necessary electrical components

If you enjoy watching a long train work its way up and down the grades of a long winding main line, the N7 is the layout for you. On this layout, yard tracks are available for breaking up and storing long trains, and a passing track with two industry spurs is available to provide additional operating diversions.

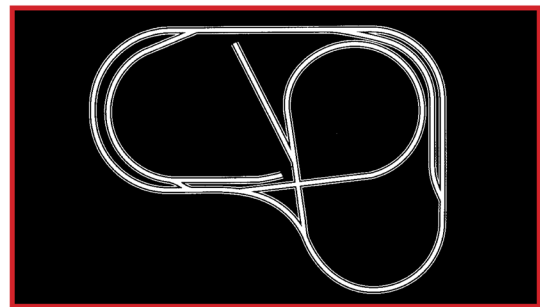

N SCALE CODE 55: N-504 PLATTSBURG PRETZEL

From web site: www.atlasrr.com **Minimum Table Size Required:** 2' x 5'

Products Required: Straight & radius sections, turnouts, a crossing, terminal joiners, bumper and a selector

Take an ordinary oval track, twist one end and you have one of the most popular track plan elements: the Figure 8. The Plattsburg Pretzel is a Figure 8, keeping operation interesting by making the train appear to reverse its direction as it proceeds. This layout also adds interest by adding a spur for more train enjoyment.

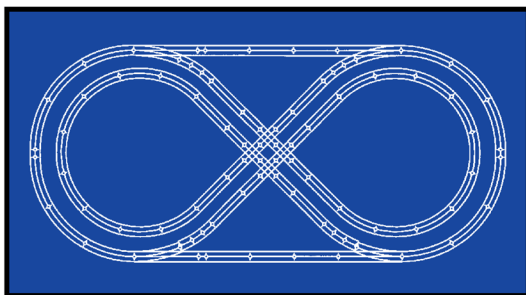

HO CODE 83/100: HO-7 THE JUNIOR PRETZEL

From Book #9: *Beginner's Guide to HO Model Railroading*

Minimum Table Size Required: 6' x 8'

Products Required: Straight sections, radius sections, Snap-Switches, rerailers, terminal sections, a crossing, bumpers, rail joiners and the necessary electrical components

Since it is built on an extended platform, there are many possibilities with the HO-7; such as longer runs, longer trains and more realistic operations.

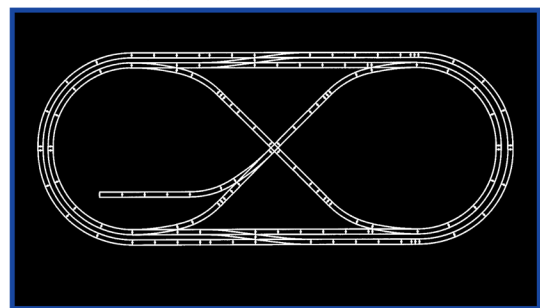

O 3-RAIL: O-22 JANESVILLE JUNCTION

From Book: *Atlas O 3-Rail Layout Book*

Minimum Table Size Required: 5' x 10'

Products Required: 68 pieces of sectional track, 4 remote switches, 4 crossings, and the necessary electrical components, rail joiners, track screws and layout wire.

This layout connects two figure eights with a quadruple crossing so trains can travel in multiple directions. A simple, yet interesting layout, this track plan is great for the modeler who loves to see trains run.

O 2-RAIL: O-203 RARITAN & SOUTH SHORE

Minimum Table Size Required: 8' x 18'

Products Required: 112 pieces of sectional track, 9 turnouts, 1 crossing and the necessary electrical components, rail joiners and layout wire.

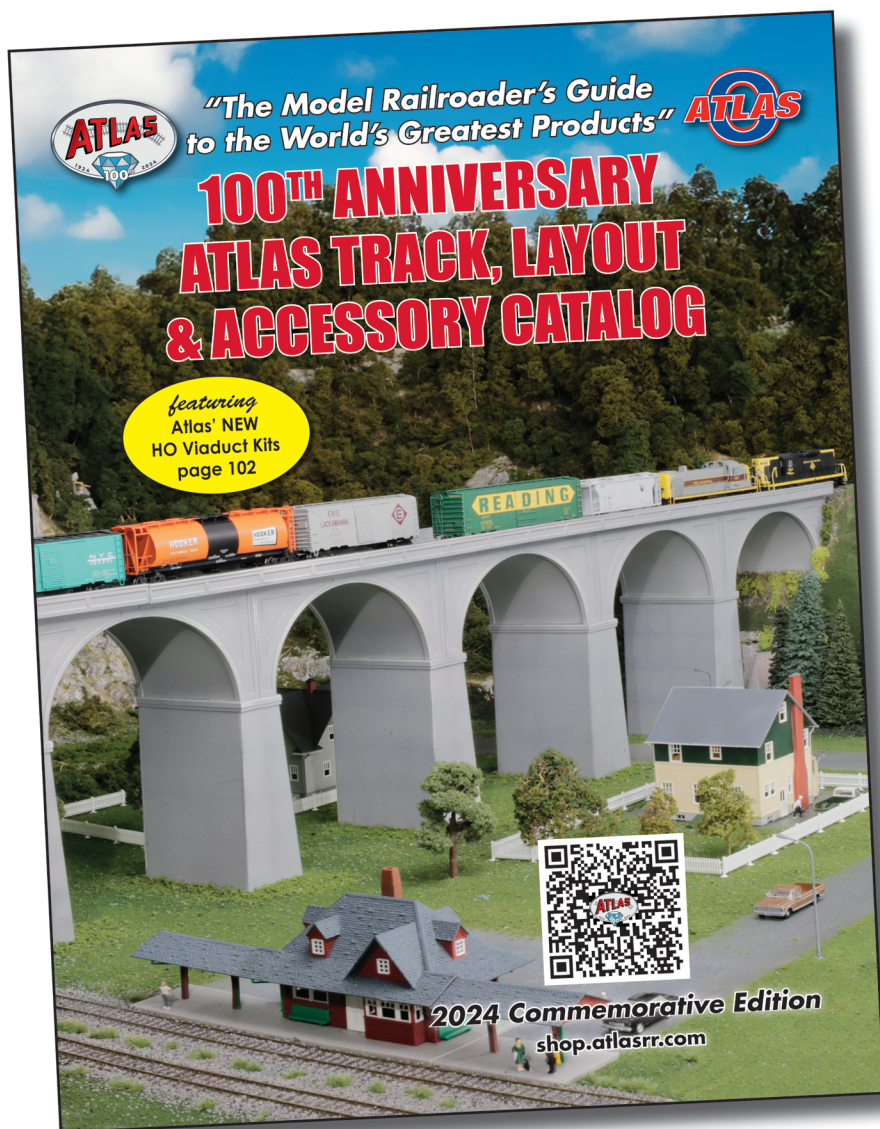

The Raritan & South Shore expands Layout O-202 to two ovals with a fully-interconnected figure eight. Trains can travel anywhere on the layout and Atlas O electrical components make wiring this layout a cinch!
