N Gauge - Scale 1:160

1968

**BE AN
EMPIRE BUILDER**

Be an "EMPIRE BUILDER" and enjoy the world's smallest operating model railroad system. Built to exactly 1:160 of the actual trains, these small masterpieces have all finely detailed bodies with exact and authentic paint and lettering schemes as used by the railroads all over the United States. In "N" scale you can build an "EMPIRE" in only 1/4 of the space you needed for "HO" scale. Try some today, you will be convinced too!

When you think of "QUALITY "N" SCALE", you think of Con-Cor "N" Scale.

Con-Cor Locomotives Feature:

Four axle "Pul-more" drive system

WOULD YOU BELIEVE!

"N" SCALE KITS FROM HELJAN

Passenger Station
B-640 Kit \$3.49

This passenger station kit was modeled after a Station found on the Pennsylvania System in the eastern United States. The model has moulded red brick walls, green trim, white windows and a black roof . . . WOW.

Freight Station
B-641 Kit \$1.98

This model was also produced using plans of a small freight station found in Wisconsin. It is ideal for that small siding or factory site. Wood grain simulated to reproduce the weathering. A real winner.

Arch Bridge with Fiers
B-661 Kit \$3.29

This bridge can be found in the book "Bridges and Buildings" by Kolmbach . . . some changes were made to mould in plastic, but all the detail is there, and of USA design, but you can find a use for several of these and to end.

Coal Loading Silo
B-662 Kit \$1.98

The factory found this little Danish coaling silo just too nice to resist modelling. Can be used to load engines, or around mines to load coal cars. (Or how about a sand and gravel yard . . . or maybe a . . .)
